PREFACE.

THE utility of the following collection of Maps, is too obvious to need any apology for their appearance, as the great omiſſions and conſiderable errors in all former collections for the uſe of Students, render it abſolutely neceſſary to have a complete and correct ſet publiſhed; which was in great forwardneſs before the death of the Editor, ſince when it has been finiſhed with as great care and exactneſs as their ſize will admit of. They are deſigned chiefly for the Students of Univerſities, and gentlemen of learned academies, to whom, their time being employed in literature with Greek and Latin authors, a correct ſet of Antient Maps cannot but be entertaining, uſeful, and improving.

All gentlemen who make their ſtudies regular, will endeavour to be maſters of the ancient geography, at the ſame time they ſtudy the modern; becauſe the preſent ſyſtem of maps and charts can be but imperfectly uſeful without a collection of antient ones to explain, not only what we read in the Jewiſh hiſtory, and Bible geography, but the multitude of places, and remarkable events, that we obſerve in peruſing the celebrated works of Greek and Roman authors; and conſequently *Juſtin*, *Nepos*, *Salluſt*, *Cæſar*, and *Livy*, have been, in our ſchools, taught with as much ſucceſs as Terence, Virgil, Horace, or Cicero. And notwithſtanding care has been taken to explain, by notes, in ſchool-books, the names of hills, rivers, and cities; pointing

out

out what kingdom or province they are ſituated in, yet for want of draughts to deſcribe theſe kingdoms, and their diviſions into provinces, neither the diſtance nor the reſpective ſituations of the places mentioned, can in any manner be apprehended by the Student, for want of which diſtinction great confuſion muſt neceſſarily ariſe in the mind. For which reaſon, to all the valuable editions of ſuch ſchools-book as have wanted them, maps have been added; but as theſe editions have been neceſſarily held at ſo great a price, as not to be eaſily obtained for the youth at ſchools, for whom as it was needful to print editions of a cheaper ſort, ſo conſequently in them theſe helps were omitted; to ſupply which this collection of Maps of the Antient World, and of ſuch parts of it chiefly as are mentioned in the Claſſic Authors, is deſigned; wherein are deſcribed the chief cities, towns, rivers, and mountains, in as perfect a manner as ſo confined a ſize will admit; whereby the ſcholar will be able, by inſpection, to ſee their ſituations, and, obſerving that each degree in the ſcale on the ſides of the maps, contains about 60 miles, he may, in ſome tolerable manner, judge of their diſtance from each other.
